

# Drawer Removal

Some installations require you to remove a drawer. Follow the steps below to remove a drawer.

1. Slide drawer out to expose the drawer retention levers. There is a lever on both sides of the drawer.

2. On the left side of the drawer, push the black plastic lever up, while at the same time, on the right side of the drawer, push the black plastic lever down. With the levers held in place, remove the drawer completely out of the drawer slides.
