

# Leg (-LG): with No Mounting Strip Assembly Instructions

1. There are two styles of legs; one with a mounting strip (left) and one with no mounting strip (right).

2. Work with the top/pencil drawer assembly turned over on a smooth surface to protect the top surface.

3. Position the leg into the side and front of the desk top trim moulding. Slide leg forward.

4. Make sure the leg fits tightly against the side and the front. There should be no gaps.

5. The edge of the pencil drawer case should be firmly against the inside of the leg.

6. Now pull out the pencil drawer and attach the side of the pencil case to the side of the leg using three 1 1/4" course thread wood screws.

7. Flip over the top/leg/drawer assembly and position it against the base unit. Note: If there is a second leg and not a base unit, repeat Steps 2-5.

8. You mount the top to the base unit by screwing directly up through the wooden mounting strip from below.

9. Using four 1 1/4" course thread wood screws, attach the base unit to the top by screwing up through the mounting strips into the top. Be careful not to countersink the screws too far.
